DETAILED ACTION

Allowable Subject Matter

Claims 1-21 and 23-29 are allowed.

The following is an examiner's statement of reasons for allowance:

The current invention claims a speakerphone with a summer, which is located before an automatic gain control module and after a hybrid echo canceller, for combining a message playback signal with a received signal from a telephone line so that a near-end party can hear the signals at a comparable level.

Li (US 5,646,990) teaches a full duplex speakerphone in figure 1, but fails to teach combining a received signal with a playback signal before an automatic gain control module and after the output of a hybrid echo canceller in a speakerphone mode. Sacca (US 5,692,042) teaches combining a playback signal with a received signal at a summer before an amplifier in figure 1. However, the summer 260 of Li combines digital signals before an automatic gain control module and after the output of a line echo canceller 254, but Sacca fails to teach that the amplifier is an automatic gain control module and signals combined by a summer are digital signals. In order to achieve the claimed limitation, further modification is required to Sacca's system, i.e. to add an automatic gain control module and to make part of the speakerphone circuitry digital. Therefore, there is no obviousness to combine Li and Sacca.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
